

HEALTH FROM THE DEPTHS OF THE PANONIAN SEA

Swimming for health.
The interior of the thermo mineral spa offers 3 pools and 3 whirlpools. Bathing in thermo mineral water benefits our entire organism.

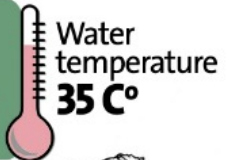

Since 1913.
The water is drawn from two wells. The first well was constructed in 1913 when a hungaro-english company drilled for oil, but found water; and the other was constructed in 2014.

Architecture.

The thermo mineral spa architecture is inspired by dr. Rudolf Steiner's philosophy, created so that the soothing ambient connects one's body, mind and soul.

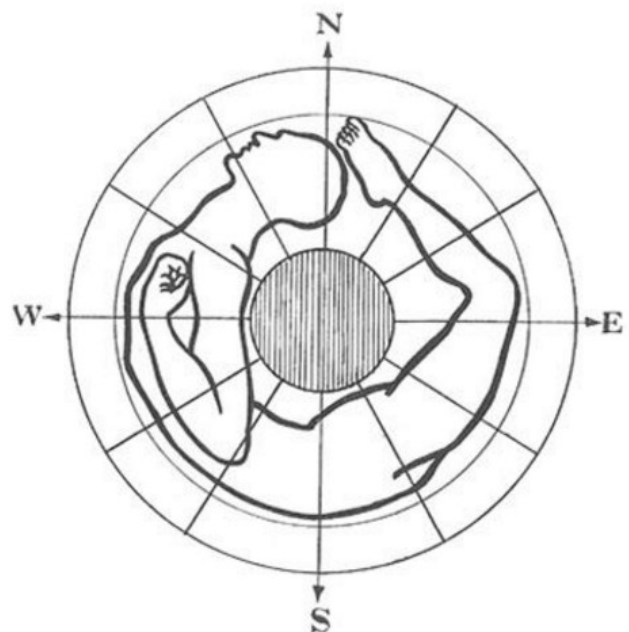

600 m.
Is the average depth from which the thermo mineral water is drawn.

Water as a Holy Grail

When talking about the positive benefits of the healing thermo mineral water below Međimurje, we can conclude that it's the one from the legend of Parsifal, which provides us with the energy needed for a balanced eternal life.

The thermo mineral spa is organized in accordance with the philosophy of dr. Steiner, who, according to the legend, chose to be born in Međimurje. His father came to Donji Kraljevec where he worked at the rail station, just in time for his son to be born. Further on, if we look at the legend of Parsifal Wolfram von Eschenbach, we can see that his Holy Grail references do not comprise of the common-knowledge Holy Grail – a vessel; but of power and energy that the Holy Grail provides – eternal life. It is believed that the healing thermo mineral waters of Panonian basin are the hidden Holy Grail which empowers a person's mind and body with a new, immortal energy.

Pannonian Sea

The Pannonian Sea is the name of the former sea basin which covered most of the middle Europe during the tertiary period, including most of the Međimurje's territory.

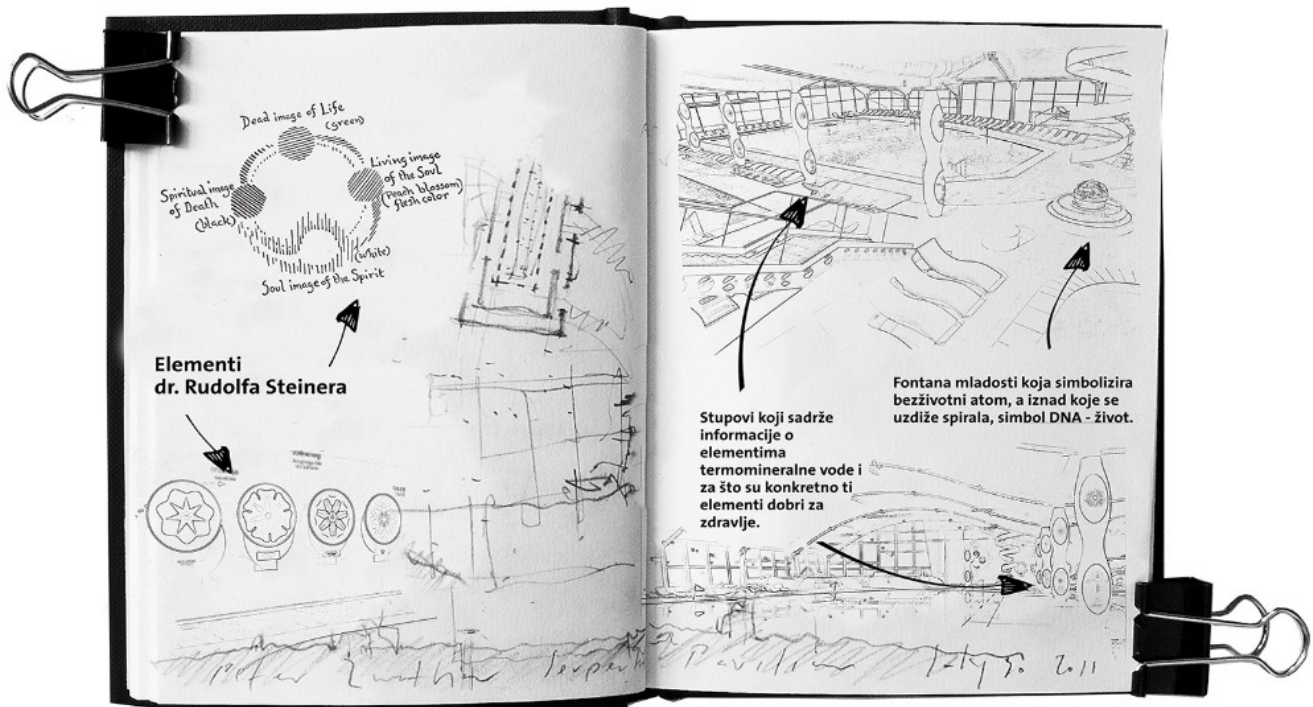

Remnants of the Pannonian Sea speak about that long passed era in the Earth's history, but also bring scientific data on numerous changes.

One of those remnants is lake Balaton in Hungary, Iron Gates (Đerdap Gorge) on Dunav, lake Sovsko on Dilj and the Black Sea. Furthermore, natural richness of Međimurje, including dozens of oil fields, healing thermo mineral water springs and even coal mines, exist because of the Pannonian Sea which existed more than 10 million years ago.

Concept and architecture

In accordance with holistic philosophy which states that the mind, soul and body need to be in balance in order to remain healthy, we devised the concept for the Temple of Life. The concept weaves authentic local elements with parts of antroposophic philosophy invented by Rudolf Steiner and the LifeClass philosophy which inspires a quality life by combining health and pleasure.

The new thermo mineral pools in LifeClass Terme Sveti Martin were designed by a famous Italian architect Maurizio Favetta – the founder and creative manager of Kingsize Architects from Milan, who teamed up with Međimurje's own Reno and Vesna Vrbanec from Dia d.o.o., and their work put these ideas and concepts into reality.
